

Change Log

- Updated the abstract, introduction, conclusion to highlight the collaborative architecture more clearly by explicitly linking cross-team collaboration to incremental architecture and be more consistent.
- Changed the name of the subsection heading from "Important Aspects" to "Communication Across Agile Teams" because it was a more descriptive name for the topic.
- Further elaborated in section 2.1 to describe the challenges of implementing multiple agile teams and why it's important to resolve these challenges, as suggested by one reviewer.
- Elaborated in section 3 on the multi-team aspect of the parallel development and fixed some interesting (confusing) word choices in the first paragraph.
